Review of Egor Jakimov

Simon Gustafsson

6th of November 2026

The text after Remark 5 claims that $L \log^+ L$ is the dual of $\exp L$, without any assumption on the measure. Theorem 6.5 of Bennett and Sharpley only gives the reverse, $\exp L$ is the dual of $L \log L$, and only for a measure space of total measure 1.

In the statement of Lemma 6, f must not be positive.
